

Corporate Policy

Sustainability & Environment

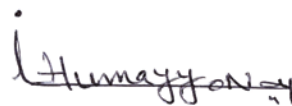

At Coronex, we envision a world where packaging delivers the maximum benefit to people while minimally impacting the environment and society. Environmental stewardship, social responsibility, and strong governance are inseparable elements of our business activities, strategies, and goals.

Our sustainability efforts centre around three key pillars:

- **Corporate Sustainability:** At Coronex, we're committed to integrating sustainability into all our business operations. We have clearly defined sustainability goals and mechanisms for monitoring our progress. We believe in cultivating a culture of sustainability within our company, fostering awareness and understanding of these issues among our employees.
- **Product Sustainability:** We focus on creating products that harmonise with the environment. Our design philosophy centres on recyclability, reuse, and composting, with a clear emphasis on using renewable or recycled materials. Each product undergoes a lifecycle assessment to uncover potential environmental impacts and address them proactively. Innovation is at the heart of our approach as we continuously strive to reduce the material used in packaging while maintaining high quality and safety standards.
- **Value Chain Collaboration:** We're dedicated to fostering sustainable practices throughout our value chain. We ensure our suppliers align with our commitment to sustainability, and we work with customers to guide them on proper packaging disposal or recycling. Furthermore, we collaborate with industry partners, local communities, and NGOs to tackle systemic packaging and sustainability issues.

At Coronex, we're fully committed to minimising resource use and reducing waste and emissions. We diligently adhere to relevant legislation and apply energy-efficient, low-emission technologies in our processes. We can significantly contribute to a more sustainable future by developing solid relationships with all stakeholders.

Our promise is to protect the environment and actively contribute to its restoration and improvement through conscious choices, innovative solutions, and responsible practices.
